## EXECUTIVE SUMMARY

The City of Pittsburg – along with partners such as Pittsburg Unified School District (PUSD), Mt. Diablo Unified School District (MDUSD), Los Medanos College (LMC), and numerous other non-profit agencies and religious institutions – provide services, programs, and educational opportunities to youth and young adults in the community. The City itself, through the Recreation Department, Police Department’s Police Activities League (PAL), and the Pittsburg Arts and Community Foundation (PACF) operate, manage, and support over a dozen youth-oriented activities, from community service programs to sports, tutoring, and fine arts. In addition, the City provides financial support for specific youth programs that provide before and after school care and tutoring, as well as programs that provide young adults with life and career skills to help prepare them for the workforce.

As the City’s population continues to grow – California Department of Finance estimates the population to exceed 90,000 by year 2040 – it will become increasingly important for Pittsburg to effectively provide services for the growing demographic of young people, and provide opportunities for them to enrich and enhance their lives, physical and mental health, and social development. The City can build on its previous successes and lessons learned, as well as the hard work of other agencies facing similar hurdles, to continue to grow the services and support provided to youth and young adults, and work to create a civic-minded populace.

Staff has researched other youth and young adult-centered planning efforts, and seeks to include the most applicable and effective goals, policies, and initiatives to the City of Pittsburg’s plan, while continuing to look to our public and private sector partners and peers to help inform and implement the strategies identified herein.

Based on the report prepared by Emerald HPC for the City in 2019, as well as research of other programs and City-led workshops, the goal of the City of Pittsburg through this effort is to:

- Identify and close gaps in service for youth and young adults;
- Alleviate the amount of unstructured downtime for youth, specifically between the end of the school day and the return of guardians to the home;
- Increase capacity, collaboration, and effectiveness of all youth services offered in Pittsburg;
- Improve the health, crime, economic, and education indicators impacting youth that are identified in the Emerald HPC conceptual framework;
- Enhance communication and outreach efforts.

This Plan has been developed with input from City Council members, the Youth Advisory Commission, City staff, the Pittsburg Police Department, PUSD Board members and staff, MDUSD Board members, LMC staff, community members, community youth, and young adults.

## BACKGROUND

The City of Pittsburg is located in east Contra Costa County, between the Cities of Concord and Antioch, along the Suisun Bay where the San Joaquin and Sacramento Rivers merge. With an estimate population of just over 72,000 as of 2019 – up from an estimated 63,000 in 2010 – the City is generally considered a suburb of some of the larger Bay Area cities. Pittsburg has historically been known as an industrial city, with large employers such as USS-POSCO and Corteva Agriscience (formerly Dow Chemical Company) calling the northern waterfront home; however, in recent years, the City has begun to experience a greater outflow of its working population, as more residents head to larger job centers to the west.

Pittsburg has one public high school, one continuation school, three junior high schools, and twelve elementary or K-8 schools. These educational facilities are operated by PUSD and MDUSD, though a small portion of southeastern Pittsburg is within the Antioch Unified School District (AUSD) attendance area. The City has one public library, two BART Stations, and is served by the Tri Delta Transit bus system. Pittsburg is also home to Los Medanos College (LMC), recently ranked in the top six for community colleges nationwide.

The City itself lacks some of the infrastructure helpful in providing youth services. Former youth centers along Marina Boulevard and Crestview Drive have been closed since the late 1990s. The Pittsburg Youth Development Center, which offers youth classes and sports, is outdated and cannot meet the demand of a city the size of Pittsburg.

## PLAN DEVELOPMENT

In May 2019, the City hired Emerald HPC to lead a roundtable discussion of representatives from the City, PUSD, MDUSD, and the Pittsburg Police Department. During the roundtable, the group listed the following common issues regarding the needs of Pittsburg youth:

- more places to gather;
- greater diversity of activities, particularly after school;
- time with parents, guardians, and positive role models/mentors; and
- employment and career pathway opportunities.

Following the roundtable discussion, Emerald HPC conducted additional demographic and background research, and identified several key consideration items that would help inform future policies, programs, or funding allocations targeting youth service. The key findings contained within the reports provided by Emerald HPC are summarized below:

- Many school age children lack supervision during the hours of 3:00 p.m. and 7:00 p.m., in part due to long commute times resulting from an imbalance of jobs in the area. Significant commutes leave less time for parents and caregivers to spend with their families and adversely affects the quality of life for children and youth.
- Social determinants are in part responsible for the unequal and avoidable differences in health status within and between communities.
- Collaboration between families, schools, and law enforcement is critical for youth, and therefore the future of communities, to prosper.
- There are predictable outcomes related to youth who become disengaged for a variety of factors. Adolescents and young adults are particularly sensitive to environmental influences,

- such as family, peer group, school, neighborhood, policies, and societal cues.
- Economic mobility is key, and poverty, unemployment, transportation, childcare, and homelessness greatly impact career/college preparation.

Following the fact-finding and research phase, staff and Emerald HPC worked together to identify a set of strategies, actions, and next steps. These include:

1. *Employment-focused skills training.* Investing in programs that train at-risk youth, reentry, and other populations in local industries will provide increased access to job opportunities close to home, thereby strengthening both the community and the local economy. Creating stronger partnerships with local community colleges and specialized employment skills training partners can help increase youth access to the skills needed for employment.
2. *Improve neighborhood health and mortality rates.* There is a need to improve the health of the people within low-income communities. This begins with neighborhood and health partnerships that include positive community education and advocacy. Once the campaign is ready for launch, there must be a strategic, facilitated outdoor community information and engagement forum with health professionals, city and county leaders and officials in partnership with respected neighborhood leaders.
3. *Community outreach and engagement to support neighborhoods and public schools.* Prior to the launch of a community outreach and engagement strategy, conversations with key stakeholders must be held so that they are sufficiently versed in agreed upon strategy. Sharing project implementation and success with the community will help residents champion the comprehensive strategy and own the commitment, effort and outcomes that support community health and prosperity.

Staff has utilized the recommendations of Emerald HPC to complete an extensive list of programs, activities, and services available to youth of all ages in the City, and has identified the most critical gap in service as high school-aged students between the hours of 3:00 and 7:00 p.m. While programs for this age group do exist, the number of spots are often limited, and programs may carry a fee. Initial opportunities noted by the 2x2 Subcommittee members include getting youth involved/engaged in local government; coordinating a youth services network by collaborating with other agencies in informing youth of resources; helping enhance job skills training; and continue to help build capacity for existing organizations.

In March 2022, the newly formed Youth Advisory Commission was asked to review and make recommendations on the draft Youth and Young Adult Services Master Plan. The input of the Commission included recommended changes to ensure an emphasis on safety, mental health, social engagement, access to workforce programs and youth providers, and the addition of a community center/hub. The Commissioners noted that the biggest challenges not a lack of available programming and opportunities, it is that many are not aware of the programs and opportunities that exist.

## DEMOGRAPHICS AND STATISTICS

The City of Pittsburg has a diverse, and relatively young population, with a large percentage (35%) of residents under the age of 25. The median age of a Pittsburg resident is 35, several years younger than the county average of 40.

As described in the Conceptual Framework prepared by Emerald HPC, and per Contra Costa County Health Department data, in Contra Costa County, a child born in a low-poverty area in 2000 could expect to live more than six years longer than a child born in a high-poverty area. Life expectancy in low-poverty areas was 81.4 years, compared to 74.9 years in high-poverty areas. African Americans in Contra Costa, in particular, had a shorter life expectancy (73.1 years) than any other racial/ethnic group.

Not surprisingly, education levels also play into life expectancy, as it is widely recognized that higher education correlates to lower levels of poverty (U.S. Census Bureau) which, as described above, have a direct impact on life expectancy. Per the Conceptual Framework, a child born in a high-education area in Contra Costa (i.e., all census tracts with less than 5% of residents with less than a high school diploma) in 2000 could expect to live more than seven years longer than a child born in a low-education area (all census tracts with 25% or more residents with less than a high school diploma). As shown in Table 1.2, below, approximately 75% of Pittsburg students surveyed as part of the California Healthy Kids Survey (CHKS) 2016-17, for PUSD responded that their parents either did not have a college degree, or did not know the education level of their parents.

The City does face a poverty rate that exceeds that of the county, approximately 13.6% compared to 9.75%. As shown in Figure 1.2, residents identifying as “Hispanic,” were the most common racial or ethnic group living below the poverty line.

Pittsburg youth also attend after school programs at a low rate. Based on CHKS 2016-17 data, more than 80% of students surveyed in grades 7, 9, and 11 did not attend after school programs at any point during the week.

Table 1.1: Population by Age

|                              | Estimate | Percent |
|------------------------------|----------|---------|
| <b>Total City population</b> | 69,449   | --      |
| <b>Under 5 years</b>         | 4,880    | 7.0%    |
| <b>5 to 9 years</b>          | 5,226    | 7.5%    |
| <b>10 to 14 years</b>        | 4,591    | 6.6%    |
| <b>15 to 19 years</b>        | 4,176    | 6.0%    |
| <b>20 to 24 years</b>        | 5,462    | 7.9%    |

## PLAN VISION, OBJECTIVES, and STRATEGIES

The *Youth and Young Adult Service Master Plan* is intended to implement the City's vision for a community that supports the education, health, and wellness of its youth and young adults and seeks to strategically improve their social and economic outcomes.

The established Vision of the Plan is reflective of the values of the City and its partners; the adopted Vision will be implemented through six over-arching goals and multiple strategies that will rely on the development of a coordinated youth services network that is facilitated by the City and includes the participation of key partners to achieve intended outcomes.

---

### VISION:

The City of Pittsburg envisions a community where all Youth and Young Adults rise above social and economic barriers to realize their full potential.

---

The formulation of this Plan is a result of feedback gathered from stakeholders and research conducted by the City and via the City's consultant, Emerald HPC. The following objectives will frame the City's actions going forward and will establish strategies for reaching the identified outcome, help provide milestones for Plan implementation, and a gauge to help measure success. Implementation Strategies may include action steps that further break down tasks. This working document will direct the collective efforts of the City and its partners, as applicable. The objectives contained herein are intended to be fluid, and staff anticipates minor modifications as additional research and outreach is conducted.

The following Implementation Strategies have been grouped according to their estimated implementation timing rated on a scale of one to three to gauge the City effort and resources required for implementation; however, due to a variety of contributing factors, the City wishes to convey that the timing of implementation may need to be adjusted as funding, personnel resources, and other factors come to light. "Short term" strategies are likely to be implemented within the first year of Plan adopted, while "medium term" strategies likely will require additional funding, staff time, or outreach with a timeline of 2-5 years. "Long term" strategies require the most outreach, planning, and funding, and thus have the furthest horizon, likely in the 3-10 year range. Many of these strategies are contingent or rely heavily upon implementation of other initiatives, but also may be ongoing once initiated.

Potential funding mechanisms for programs include new tax and lease revenues from specific businesses or developments, private contributions, Pittsburg Power Company contributions, General Fund revenues, event sponsorship, and grants. Funding for facilities and capital projects, such as future recreation or other types of youth centers will likely come from community benefit contributions or other types of private sponsorship; however, staff will explore other financing options, such as enhanced infrastructure financing districts (EIFD) and grants.

**OBJECTIVE 1: IDENTIFY GAPS IN YOUTH AND YOUNG ADULT SERVICES.**

As part of this effort, the City seeks to help fill the voids facing certain groups of youth and young adults that may not benefit from or qualify for traditional after school and summer programs and services such as organized sports or child day care. Identifying these “gaps” will require input from several key partners, as noted below, each with a specific role and expertise. The City’s goal is to identify the group or groups lacking options for unstructured downtime, what opportunities currently exist that may need to be expanded or receive additional support, and how the City’s partners can help create a continuum or services that will guide youth in Pittsburg through their teen and young adult years.

**KEY PARTNERS:**

City of Pittsburg  
 School District Representatives  
 Los Medanos College  
 Non-Profit Organizations  
 Religious Institutions

**RESOURCES NEEDED:**

Information on existing programs throughout the City  
 Staff personnel to manage database(s)  
 Volunteers for Youth Commission

**IMPLEMENTATION STRATEGIES:**

**Short Term**

- 1.1 Establish a database of youth and young adult services to help identify underserved demographics. 

*Progress indicators: Database creation*
- 1.2 Inventory public and privately-owned facilities within the City to identify needs and spaces for youth programming. 

*Progress indicators: Inventory completion*
- 1.3 Convene a series of roundtables to discuss the needs of youth and young adults in the City. Align City efforts with local school districts, LMC, and private service providers. 

**Medium Term**

- 1.4 Engage Contra Costa County Probation, foster care providers, and behavioral health counselors to understand specific needs for high-risk youth in Pittsburg
- 1.5 Convene a working group with LMC to identify and address workforce development needs and required skills, as well as programs for teens and young adults. 

- 1.6 Identify an organization or commission comprised of youth and/or young adults that can provide insights to service gaps. 

*Progress indicators: Continue and grow the Youth Advisory Commission and their role in reviewing youth initiatives.*

**OBJECTIVE 2: DEVELOP A COORDINATED YOUTH SERVICES NETWORK THAT SUPPORTS POSITIVE YOUTH DEVELOPMENT.**

One of the most critical aspects of providing youth services is ensuring facilities that offer youth and young adults a safe and supportive space where they can learn new life, social, and career skills that will help them throughout their lives. City-operated programs and facilities should be designed to promote youth engagement and growth within underserved populations.

**KEY PARTNERS:**

City of Pittsburg Staff  
 City of Pittsburg Police Activates League (PAL)  
 Volunteers

**RESOURCES NEEDED:**

Community Center  
 Operational and maintenance funding  
 Private funding

**IMPLEMENTATION STRATEGIES:**

**Short Term**

- 2.1 Acquire and operate a community center or hub to provide a centralized location for programs and services supported by the youth services network 

- 2.1 Inform and educate staff about accepted best youth development program planning practices. 

*Progress indicators: Short term: Seminar for staff on best practices; Long term: 75% approval rating for programs in relation to youth development*

- 2.2 Establish local branches of youth support initiatives and collaborate with youth mentorship organizations to increase the number of at-risk and minority youth with positive and professional role models 

*Progress indicators: Establishment of programs and identification of funding mechanisms.*

**Medium Term**

- 2.3 Rename/reorganize Recreation Department to “Recreation and Youth Development Department” to emphasize the City’s focus on youth development

2.4 Establish a youth services network working group including representatives from PUSD, MDUSD, LMC, and PAL to meet regularly and identify, implement, and assess data-driven programs and services to drive identified plan outcomes

---

2.5 Host a youth services symposium, at least annually, to collaborate with all youth service providers to share best practices, grant and contract opportunities, data, and encourage participation in the youth services network

---

2.6 Develop collaborative and innovative programs that will attract and secure private investments, philanthropic donations, and grants

---

2.7 Develop a strategy to support long-term operation of youth facilities and programs that emphasizes cost reduction and collaboration with other government and private youth service providers

---

### Long Term

---

2.8 Identify opportunities to partner with a private developer(s) or financier(s) to construct a community recreational center. 

---

2.9 Evaluate and improve safety measures within the City.

---

*Progress Indicators: Create a city-wide safety system within parks and shopping centers similar to the “Blue Light Alarm” system on college campuses; Continue to evaluate and ensure pedestrian accessibility*

**OBJECTIVE 3: INCREASE YOUTH AND YOUNG ADULT ENGAGEMENT IN SERVICE AND LEADERSHIP OPPORTUNITIES.**

As the City seeks to provide additional opportunities for youth and young adult engagement and service, the participation of these groups in City affairs is critical in helping to create a new generation of civic-minded residents that will lead Pittsburg and other communities for the next several decades. Providing youth and young adults with further knowledge and experience in City operations will create additional transparency and provide valuable insights into how Pittsburg functions, while also contributing fresh ideas and perspectives that reflect emerging voices.

**KEY PARTNERS:**

City of Pittsburg Staff  
 Youth Volunteers  
 PUSD Staff

**RESOURCES NEEDED:**

Funding for programs  
 School facilities for program implementation  
 Community Center

**IMPLEMENTATION STRATEGIES:**

**Short Term**

- 3.1 Increase opportunities for youth civic engagement through service-learning projects and volunteerism. 

*Progress indicators: Staff will monitor increases in youth participation in civic events and projects*

**Medium Term**

- 3.2 Partner with youth leadership programs to increase the exposure and experience of Pittsburg youth in the areas of college and career exploration, entrepreneurship, and community building

**Long Term**

- 3.3 Engage high school and college-aged students in development of smart solutions that seek to utilize technology to improve City services. 

*Progress indicators: Identification of a program geared toward high school age students and adopted of the student-created solution by the City*

**OBJECTIVE 4: ADDRESS HEALTH, CRIME, ECONOMIC, AND EDUCATION DISPARITIES IMPACTING PITTSBURG YOUTH AND YOUNG ADULTS.**

Low income families and communities of color are disproportionately affected by lack of health care and availability of mental health and wellness services. As described above, there is a need to improve the health of the people within Pittsburg, and particularly children and young adults living in poverty. The City seeks to address these issues in part through neighborhood and health partnerships, community education, and advocacy. Input from youth and young adults regarding the challenges faced on a day-to-day basis is critical to properly address these issues.

**KEY PARTNERS:**

City of Pittsburg Staff  
 Health Experts  
 PUSD/MDUSD Psychology Staff  
 LMC Diversity Leaders

**RESOURCES NEEDED:**

Funding for review of City programs to address health and wellness, nutrition, etc.  
 Facility where resources can be implemented

**IMPLEMENTATION STRATEGIES:**

**Short Term**

4.1 Assess existing programs for health and wellness components.   
*Progress indicators: Staff will conduct a review of existing programs that support health and wellness*

**Medium Term**

4.2 Collaborate with local youth sports organizations to incorporate health and fitness components throughout all youth programs and increase youth participation in health and fitness activities, including both competitive and recreational sports   
 .

*Progress indicators: Staff will include assessments regarding health and fitness when bringing items before the City Council for funding or updates*

4.3 Establish General Plan goals and policies that encourage health and wellness, specifically for youth from lower-income families. 

4.4 Form partnerships to conduct youth programs that promote active, healthy lifestyles and positive development. 

4.5 Collaborate with health and wellness professionals to provide accessible mental health programs, classes, groups, etc.

*Progress Indicators: Provide a space for access to counselors, therapists, and health experts to provide services*

- 4.6 Partner with PUSD (Student Attendance Review Board), Contra Costa County Board of Education (Foster Youth Services Coordinating Program), and Contra Costa County Probation, to identify programs that support youth involved with the juvenile justice system and those exhibiting high truancy rates

Long Term

- 4.7 Collaborate with PUSD (nutrition) and local community gardens to integrate nutrition education throughout youth programs and increase youth participation in healthy foods education and food sustainability initiatives  
*Progress indicators: Staff will include assessments regarding nutrition education when bringing items before the City Council for funding or updates*

- 4.8 Increase participation from local businesses and youth in the Youth Works Employment Program

- 4.9 Partner with local banks and community organizations to promote and provide financial literacy programs

- 4.10 Promote the arts (music, theatre, multimedia, painting, and literature) through youth programs by collaborating with local organizations and artists

**OBJECTIVE 5: COLLABORATE WITH PUBLIC AND PRIVATE ORGANIZATIONS TO IMPROVE COMMUNICATIONS AND INVOLVE TARGET DEMOGRAPHICS IN PROCESS OF MARKETING AND OUTREACH.**

The City’s community outreach and engagement strategy will include conversations with key stakeholders. Effectiveness of any adopted initiative will rely on the community, faith leaders, and residents to champion the strategies contained within the Plan.

A community outreach and engagement strategy may utilize volunteers who have sufficient interest in the strategy, sufficient time to participate, and collaborative training prior to involvement. These trained and certified volunteers can include parents, members of the religious community, relevant non-profits, school district student services staff, City employees, and youth that desire to participate, including those from the Police Department or PAL, and high school and college students enrolled Pittsburg High School, Mt. Diablo High School, and at Los Medanos College.

**KEY PARTNERS:**

- City of Pittsburg Staff
- PUSD Staff
- MDUSD Staff
- LMC Staff
- Community Leaders
- Faith-Based Organizations
- Private Youth Service Providers

**RESOURCES NEEDED:**

- Multimedia budget
- Volunteers and organizations to promote initiatives
- Equipment and software for preparation of outreach materials

**IMPLEMENTATION STRATEGIES:**

---

**Short Term**

---

- 5.1 Evaluate the current means of communication that the City is using for effectiveness and explore alternative options for youth messaging 
- Progress indicators: Increase presence on Instagram and TikTok, Work with Youth Commission as communication ambassadors, attend and promote during school club days and events, host open mic nights or Café Talks*
- 

**Medium Term**

---

- 5.2 Establish a marketing strategy that will ensure that youth, parents, and other stakeholders are aware of programs, facilities, services and the benefits of participation. 
- Progress indicators: Conducts follow-up assessments to gauge interaction and effectiveness.*
-

- 5.3 Partner with a multimedia organization to establish an Inspire Pittsburg design challenge and use the process to market youth involvement and civic responsibility. 

Long Term

- 5.4 Facilitate educational campaigns to raise awareness and combat issues facing youth including drug and alcohol abuse, mental health, bullying, and community violence
- 5.5 Partner with LMC to design a campaign intended to promote college and career services to graduating high school seniors and young adults.   
*Progress indicators: Conducts follow-up assessments to gauge effectiveness.*
- 5.6 Partner with LMC and PHS to promote and enhance the "College Connect" (former Dual Enrollment program) for High School Seniors 

**OBJECTIVE 6: TRACK AND REPORT PROGRESS ON PLAN IMPLEMENTATION AND OUTCOMES.**

This Plan is intended to evolve along with the City, as well as the youth and young adults which it serves. To allow the Plan to continually address the needs of the City as it grows, additional input is received, and funding becomes available, consistent review and analyzing of the policies and strategies of this document will be critical.

**KEY PARTNERS:**  
City of Pittsburg Staff  
City Council

**RESOURCES NEEDED:**  
No additional resources required

**IMPLEMENTATION STRATEGIES:**

Ongoing

- 6.1 Provide quarterly updates on Plan implementation to the School District(s) Subcommittee (2x2). 
- 6.2 Provide bi-annual updates on Plan implementation to the City Council. 
- 6.3 Create a program assessment database that tracks program outcomes and analyzes their effect on social and economic indicators impacting youth and young adults utilizing the most recent datasets

- 6.4 Identify key performance indicators and outcomes including, but not limited to:
- The public has access to a City-managed database of all youth programs and services in the City that provides information on program type, cost, time, and age group
  - A youth services network is established that coordinates services and programs offered by the City, local school and college districts, PAL, and community-based organizations to leverage funding and improve outcomes for youth and young adults in Pittsburgh
  - At least 20% of high school students attend an after-school program daily
  - At least 70% of Pittsburgh youth graduate college and career prepared
  - Reduce the number of juvenile arrests and youth on probation in the City of Pittsburgh
  - Increase youth employment
  - Reduce youth drug and alcohol use
  - Improve physical and mental health
  - Reduce the amount of unstructured youth downtime

## OBJECTIVE AND STRATEGY SPECIFIC TO PARENTS/ADULTS

### OBJECTIVE 1: ESTABLISH POLICIES THAT SEEK TO HELP REDUCE UNSTRUCTURED DOWNTIME AND ALLOW GUARDIANS TO SPEND THE MAXIMUM AMOUNT OF TIME WITH CHILDREN.

As discussed previously and conveyed through the Framework prepared by Emerald HPC, many school age children lack supervision during the hours of 3:00 p.m. and 7:00 p.m., in part due to long commute times resulting from an imbalance of jobs in the area; this period of time is commonly referred to as “unstructured downtime,” and has been shown to be detrimental to youth and young adults and contribute to disengagement. Significant commutes leave less time for parents and caregivers to spend with their families and adversely affects the quality of life for children and youth.

#### KEY PARTNERS:

City of Pittsburg Staff  
 Economic Development Experts  
 Business Owners/Operators  
 Real Estate Professionals

#### RESOURCES NEEDED:

Grant funding for plan development  
 Private funding and development for infrastructure improvements

### IMPLEMENTATION STRATEGIES:

#### Medium Term

- 1.1 As part of the General Plan update process, establish goals and policies that seek to bring jobs to East Contra Costa County, reducing commutes and allowing more time at home. 

#### Long Term

- 1.2 Identify creative solutions and provide infrastructure that allows for telecommuting or satellite offices in Pittsburg. 

*Progress indicators: Increase in the number of homes accessing high speed internet*

## I. INTRODUCTION

### *Purpose*

The City of Pittsburg has contracted with Emerald HPC International, LLC to develop a *Conceptual Framework* focused on the identification of fact-based issues facing youth, families and neighborhoods throughout the city of Pittsburg.

It is clear through research and assessment that, depending on the strategies that the City of Pittsburg decides to utilize in order to impact particular indicators, turning the dial on critical issues facing the city will most likely require extensive and outcomes-based collaboration between relevant city staff and potential partners, such as education leaders, existing and effective non-profits, law enforcement, county youth correction facilities, Los Medanos College, substance abuse programs, faith-based organizations and job training programs,.

Such a collaboration will need to be directed by individuals who have a comprehensive understanding of issues identified in this framework and include the involvement of city officials, school administration, youth, households, specific and relevant non-profits, political representatives and other regional stakeholders, through a process of articulating strategic opportunities and defining interlocking roles for the partner stakeholders.

With the assistance of a project leader, stakeholder participation should be facilitated through a process of articulating strategic opportunities and defining interlocking roles for partners.

### *Role of the Conceptual Framework in the Collaborative Planning Process*

Core to our *High Performing Communities Framework*<sup>™</sup> (HPC) is the development of a conceptual framework that identifies and articulates potential strategies and interlocking roles of stakeholder partner organizations.

The design of a conceptual framework, in the HPC process, precedes development of a full-blown, operationalized plan. The facts and data within the framework help create pathways to addressing issues facing youth, families, and neighborhoods.

We define a conceptual framework as:

***“a tool for making conceptual distinctions and organizing ideas to help guide a planning team in the process of articulating a strategy or strategies based on an identified set of interlocking roles assigned to organizations, assets and stakeholders, for the specific purpose of achieving measurable outcomes.”*** (An animation of the HPC process can be found at [www.emeraldhpc.com/hpc-process.html](http://www.emeraldhpc.com/hpc-process.html).)

An initiative based on a conceptual framework requires general acknowledgement, acceptance, and agreement with a common set of facts and indicators among the stakeholders. This framework presents the groundwork for such an agreement.

The facts and data within this framework can help guide a tangible implementation process that begins with the immediate focus on a youth services collaborative strategy that builds and strengthens the partner relationships needed to achieve long term outcomes.

This framework may also help guide policy related to youth services funding that aligns with agreed-upon partner goals and provides long-term financial stability to encourage and enhance system cohesion, inter-locking partner roles, service integration, community trust and support, and advocacy for targeted youth and families.

## II. FACT-FINDING, RESEARCH, & ANALYSIS: KEY INDICATORS

During the fact-finding phase of our work, we facilitated a roundtable discussion, hosted by the City of Pittsburg, with school district and city officials. This group listed the following common issues regarding the needs of Pittsburg youth: *more places to gather; greater diversity of activities, particularly after school; time with parents; and employment and career pathway opportunities.*

We have now conducted demographic research and analysis based on those issues.

As we translated the issues into research priorities, important underlying facts have been identified that help clarify needs and root causes. With a better understanding of root causation, the community can properly identify key indicators with potential strategies for change. This in turn can inform a facilitated collaborative process to oversee and implement the desired strategies and to measure impact outcomes.

It is important to avoid the promotion of assumptions, biases or fears based on false narratives, silos, competition or stereotypes about age, ethnicity, neighborhoods and income levels and to set additional or new goals based on factual as well as current and relevant data.

Identifying and working with the right stakeholder and planning team will help further dissect and understand root causes underlying the statistics, studies, and community perceptions. The city, professional stakeholders and residents must have the right perspective in order to really make a difference.

### ***Health, Crime, Economic, and Education Indicators***

We must note from the onset that East Contra Costa is home to over 300,000 people, with many residents living in historic high-poverty areas and long commute times due to a lack of jobs close to home. The average commute for many residents in the region is an hour and a half one way. This leaves less time for parents and caregivers to spend with their families and to become rooted and engaged in civic life and adversely affects the quality of life for children and youth.

Moreover, in our work, we have consistently found that impoverished neighborhoods are challenged with serious crime, health, and education problems that restrict the opportunities of those growing up and living in these communities. These barriers often thwart economic development and business growth efforts as well and can drive a wedge between the three groups that must be working in trust and unity for a community to grow and prosper. They are: *families, schools, and law enforcement.*

The data that we are providing is eye opening, and more importantly, helps to create a road map for understanding and changing key community dynamics in Pittsburg.

### **Health and Wellness**

The following data is from: <https://cchealth.org/health-data/population.php>

In Contra Costa, greater wealth equates to longer life. A child born in a low-poverty area in 2000 could expect to live more than six years longer than a child born in a high-poverty area. Life expectancy in low-poverty areas was 81.4 years and 74.9 years in high-poverty areas.

African Americans in Contra Costa had a shorter life expectancy (73.1 years) than any other racial/ethnic group in the county. An Asian/Pacific Islander or Hispanic baby born between 2005 and 2007 in Contra Costa could expect to live more than 12 years longer than an African American baby born at the same time.

A child born in a high-education area in Contra Costa (i.e., all census tracts with less than 5% of residents with less than a high school diploma) in 2000 could expect to live more than seven years longer than a child born in a low-education area (all census tracts with 25% or more residents with less than a high school diploma).

Between 2005–2007, heart disease and cancer accounted for roughly half of all deaths in Contra Costa and California. Heart disease accounted for 22.7% of all deaths in Contra Costa, making it the second leading cause of death in the county after cancer.

Diabetes was the seventh leading cause of death in Contra Costa, accounting for 2.9% of all deaths in the county. People living in San Pablo, **Pittsburg**, Antioch and Richmond were more likely to die from diabetes compared to the county overall.

### **Social Determinants of Health**

We cannot minimize the critical importance of including health in your strategy for youth and community development. Social determinants have a direct impact on health disparities among specific populations.

The data shows that ***race and ethnicity, gender, sexual identity, age, disability, socioeconomic status, and geographic location*** all contribute to an individual’s ability to achieve good health.

According to the *Office of Disease Prevention and Health Promotion*, “**A range of personal, social, economic, and environmental factors contributes to individual and population health.**” They go on to say: “People with a quality education, stable employment, safe homes and neighborhoods, and access to preventive services tend to be healthier throughout their lives. Conversely, poor health outcomes are often made worse by the interaction between individuals and their social and physical environment.”

Concentrated pockets of residents suffering from poor physical conditions are a barrier to economic growth and stability. According to the *National Assessment of Adult Literacy*, African American, Hispanic, and American Indian or Alaska Native adults were significantly more likely to have below basic health literacy compared to their white and Asian or Pacific Islander counterparts. Hispanic adults had the lowest average health literacy score compared to adults in other racial and ethnic groups.

Social determinants are in part responsible for the unequal and avoidable differences in health status within and between communities. As a leading health topic, social determinants take into account the critical role of ***home, school, workplace, neighborhood, and community*** in improving health.

From infancy through old age, the conditions in the social and physical environments in which people are born, live, work, and age can have a significant influence on health outcomes as follows:

#### ***Prenatal***

According to the *Journal of Public Health Management and Practice*, it is important to improve the prenatal health-related behaviors of women, “including reducing their use of cigarettes, alcohol illegal drugs and economic worry and pregnancy as well as related birth related complications.”

Further, other documented benefits of prenatal care include longer intervals between the birth of the first and second child, longer relationships with current partner, and fewer months of using welfare and food stamps. The positive effects of proper prenatal care reduce the societal outcomes of crime, substance abuse, teen pregnancy, child abuse, child neglect, and domestic violence.

#### ***Children***

Early and middle childhood provides the physical, cognitive, and social-emotional foundation for lifelong health, learning, and wellbeing. A history of exposure to adverse experiences in childhood, including exposure to violence and maltreatment, is associated with health risk behaviors such as smoking, alcohol and drug use, and risky sexual behavior, as well as health problems such as obesity, diabetes, heart disease, sexually transmitted diseases, and attempted suicide. Features of the built environment, such as exposure to lead-based paint hazards and pests, negatively affect the health and development of young children.

#### ***Adolescents***

Because they are in developmental transition, adolescents and young adults are particularly sensitive to environmental influences. Environmental factors, including family, peer group, school, neighborhood, policies, and societal cues, can either support or challenge young people’s health and wellbeing.

Addressing young people's positive development facilitates their adoption of healthy behaviors and helps to ensure a healthy and productive future adult population. Adolescents who grow up in neighborhoods characterized by poverty are more likely to be victims of violence; use tobacco, alcohol, and other substances; become obese; and engage in risky sexual behavior.

### *Adults*

Access to and availability of healthier foods can help adults follow healthful diets.

For example, better access to retail venues that sell healthier options may have a positive impact on a person's diet. These venues may be less available in low-income or rural neighborhoods. Also, longer hours, compressed work weeks, shift work, reduced job security, and part-time and temporary work are realities of the modern workplace and are increasingly affecting the health and lives of U.S. adults. Research has shown that workers experiencing these stressors are at higher risk of injuries, heart disease, and digestive disorders.

### *Older Adults*

Availability of community-based resources and transportation options for older adults can positively affect health status. Studies have shown that increased levels of social support are associated with a lower risk for physical disease, mental illness, and death.

### *Impact of Social Determinants on Social Emotional Youth Health Disparities*

There are predictable outcomes related to youth who become disengaged because of family, school, and neighborhood disparities. As outlined above, key risk factors affect the physical, cognitive, and social-emotional foundation for lifelong health, learning, and wellbeing of youth and can lead to smoking, alcohol and drug use, and risky sexual behavior, as well as health problems such as obesity, diabetes, heart disease, sexually transmitted diseases, and attempted suicide. Adolescents and young adults are particularly sensitive to environmental influences, such as family, peer group, school, neighborhood, policies, and societal cues.

It is important to emphasize a focus on health and education indicators for children and adolescents when discussing youth development strategies and related assessment tools because youth are our economic, workforce and education pipeline for regional economic stability and their health and wellbeing is a predictor of future community health and prosperity.

### **Youth Arrests and Incarceration**

Youth incarceration is typically a result of family, school, and community disconnect created by poverty and the adult response to the health and social disparities discussed above. The interlocking roles these dynamics play is important to consider when determining a collaborative strategy. They are not independent issues.

The data below is related to youth arrests in Pittsburg and in the county in general. *Please use the attached links provided for further information.*

In Pittsburg, **Juvenile Arrests in Pittsburg are up 34%**, comparing January - May 2018 to January - May 2019.

<http://www.ci.pittsburg.ca.us/Modules/ShowDocument.aspx?documentid=11129>

Within Contra Costa County, the incarceration rates reveal a similar stark disparity: 16 youth incarcerated for every 1,000 black youth compared to 1 for every 1,000 white youth. Interestingly, in Alameda the disparity is not quite so dramatic when it comes to incarceration: 5 black youth incarcerated for every 1,000 compared to 0 per 1,000 for whites. <https://youthlaw.org/publication/powerful-new-tool-for-examining-the-youth-incarceration-data-reveals-the-depth-of-the-problem-in-the-united-states/>

Per 100,000 youth, Contra Costa has only 330 youth felony arrests compared to the California average of 478. However, Contra Costa has a youth state confinement rate of 107 youth for every 100,000 compared to California's average of only 34. This may be indicative of an issue with how we as a community deal with behavior from youth that is deemed undesirable. <http://casi.cjci.org/Juvenile/Contra-Costa>

Youth who have contact with the juvenile justice system are at increased risk for a number of negative long-term outcomes—such as injury, substance use and dependency, dropping out of school, and early pregnancy—when compared with the general youth population. Youth who have been detained also may face difficulty gaining the educational credentials they need to obtain sustained employment and may be more likely to engage in criminal behavior as adults. Conditions that increase the likelihood of involvement with the juvenile justice system include family poverty, separation from family members including parental incarceration, a history of maltreatment, and exposure to violence in the home and community. <https://www.kidsdata.org/export/pdf?cat=30>

In 2015 in Contra Costa, 1.6 per every 1,000 white youth was placed on “electronic monitoring” also known as an ankle monitor, compare this to 17.6 per 1000 for black youth. Statewide for every 1 white youth referred to probation there were 1.2 Latino youth and 3.1 black youth in 2006. By 2015 the gap actually widened to 1.4 Latino youth and 3.8 black youth for every 1 white youth referred to probation.

<http://casi.cjci.org/Juvenile/Contra-Costa>

Within California in 2014, for every 1 white youth tried as an adult there were 3.3 Latino youth and 11.3 black youth tried as an adult. In 2014, Contra Costa filed 8 white youth, 5 Latino youth and 98 black youth into the adult court system. [http://www.cicj.org/uploads/cicj/documents/the\\_prosecution\\_of\\_youth\\_as\\_adults.pdf](http://www.cicj.org/uploads/cicj/documents/the_prosecution_of_youth_as_adults.pdf)

An evaluation of a restorative justice program in Alameda County shows restorative justice diversion works. Youth who participated in a diversion process were 44% less likely to recidivate compared to youth who were processed through the juvenile legal system.

<https://www.acgov.org/probation/documents/AlamedaJJCPresentation10.10.18.pdf>

### **Obstacles to Economic Mobility: Poverty, Unemployment, Transportation, Childcare, Homelessness**

It is important to understand how personal, social, educational and environmental factors contribute to economic barriers in the region that impact opportunities for youth and families. The following information is critical to ensure that Pittsburg effectively addresses service gaps and does not miss serving those most in need because of stereotypes and misinformation about residents and especially youth of color.

#### ***Poverty***

The 2008 economic recession forced millions of Americans into poverty, up from 11% in 2000 to about 15%. Poverty rates actually improved under the Obama administration, going down to 12.7% in 2016. Of the 39.5 million people living below the poverty line who rely on food stamps, 43% are white and only 23% are black. And, when we look at the 20 million people living in extreme poverty (those households making less than 50 percent of the poverty threshold), 42% are white and 26% are black.

With that said, through our research we found the following additional facts regarding poverty:

A *Stanford University* study shows that in 1970, 65 percent of America’s families lived in “middle- income” situations. By 2008, only 43 percent of U.S. families lived in middle-income neighborhoods.

Meanwhile, over that same period of time, the share of families living in either poor or rich neighborhoods essentially doubled. (*The book "Coming Apart" draws on five decades of statistics and research that describes these findings.*)

Further, it was once thought that poverty was mostly a problem for minorities in urban neighborhoods, or those living in the rural areas, particularly in Southern states. But the reality is that poverty is beginning to devour what was a majority of white middle-class families in major suburban areas.

Our work has required developing a deeper understanding of the effects of concentrated poverty on neighborhoods in this region. Neighborhoods with concentrated poverty oftentimes isolate their residents from the resources and networks they need to reach their potential and deprive the larger community of the neighborhood’s human and social capital.

## City of Pittsburg Youth Services Collaborative Strategy

With both the rise of poverty in urban communities such as Pittsburg and suburban areas throughout the United States, researchers have sought to interpret the dynamic between neighborhoods and residents in communities of concentrated poverty.

Impoverished neighborhoods are challenged with serious crime, health, and education problems that, in turn, further restrict the opportunities of those growing up and living in them, and thwart business development and business acquisition efforts.

Pittsburg has no alternative but to take seriously the economic status of populations within the city. **As the chart below indicates, Pittsburg’s poverty rate is 13.6%** (people living below poverty level).

<http://worldpopulationreview.com>

| <b>City/Municipality</b>   | <b>Population</b> | <b># of Businesses</b> | <b>Poverty Rate</b> |
|--|-------------------|------------------------|---------------------|
| Hercules   | 25,545            | 1,630                  | 5.5%                |
| Rodeo  | 10,400            | 15                     | 15.23%              |
| Crockett (unincorporated)  | 3,044             | (n/a)                  | 9.2%                |
| Martinez   | 38,402            | 3,489                  | 5.6%                |
| Walnut Creek   | 70,667            | 19,176                 | 7.0%                |
| Concord  | 130,559           | 10,859                 | 11.2%               |
| Bay Point (unincorporated)   | 21,349            | 1,268                  | 21.7%               |
| <b>Pittsburg</b>   | <b>72,141</b>     | <b>4,367</b>           | <b>13.6%</b>        |
| Antioch  | 112,635           | 6,018                  | 14.6%               |
| <i>(Note: Antioch’s 94509 zip code has a population of 67,279 &amp; a poverty rate of 18.1%; while Antioch’s 94531 zip code has a population of 45,356 &amp; a poverty rate of 9.3%. <a href="https://factfinder.census.gov">https://factfinder.census.gov</a>.)</i> |                   |                        |                     |
| Brentwood  | 65,288            | 4,106                  | 7.7%                |
| Oakley   | 43,051            | 1,902                  | 7.5%                |

Contra Costa County has a population of 1,150,215 and an overall poverty rate of 9.8%.

### ***A key barrier to economic mobility in Pittsburg and East Contra Costa is the lack of industry and work opportunities near home.***

African Americans and Hispanics are more likely to be unemployed compared to their white counterparts. Further, all adults with less than a high school education are three times more likely to be unemployed than those with a bachelor’s degree.

Inequitable access to high-quality education contributes to achievement gaps across racial, ethnic, and economic lines and to the decline of student achievement across the U.S. compared to other industrialized nations.

Creating skilled workers for an economy that is constantly changing requires strategic investments and better education and workforce development programs, which must be coordinated and aligned with employers’ needs.

While providing access to college should remain a high priority, the majority of jobs will continue to require more than a high school diploma but less than a four-year degree, making education beyond high school increasingly essential.

The following data is from: <https://datausa.io/profile/geo/pittsburg-ca/>

In Pittsburg, 36,395 are employed out of an adult labor force of 38,145. However, with a population of over 70,000, there is a need for more jobs locally, especially for teens and transitional aged youth who will find it more difficult to make a long commute. Of those adults employed:

- 6,915 (19.0%) live and work in Pittsburg
- 25,039 (68.8%) work elsewhere in Contra Costa
- 4,440 (12.2%) work outside of Contra Costa
- 1,017 (3.2%) (of all workers) work at home

The largest industries in Pittsburg are *Health Care & Social Assistance* (5,608 people), *Retail Trade* (3,509 people), and *Administrative & Support & Waste Management Services* (2,872 people).

The highest paying industries are *Utilities* (\$73,301), *Mining, Quarrying, & Oil & Gas Extraction* (\$70,313), and *Professional, Scientific, & Technical Services* (\$61,639). Read more at: <http://www.city-data.com/work/work-Pittsburg-California.html>

Possible solutions would include increasing employment-focused skills training opportunities for underserved populations in local high-demand occupations and industries. This would be more beneficial than providing training in occupations that would require a longer commute for employment.

Programs that train at risk youth, reentry, and homeless populations in local industries will provide increased access to job opportunities close to home, thereby strengthening both the community and the local economy.

In addition, creating incentives and opportunities for business expansion and small business start-ups would increase the number of local jobs available to the local workforce, create supply chain companies, develop more qualified local contractors and subcontractors and help to revitalize the local economy.

*Conceptual Framework for Community and Human Capital Development Strategy (Emerald HPC International, LLC as presentation to the Northern Waterfront Economic Development Initiative Ad Hoc Community in May 2018)*

### ***Another barrier to economic mobility in Pittsburg and East Contra Costa is transportation.***

Low-income minorities on average spend more time traveling to work and other daily destinations than do low-income whites because they have fewer private vehicles and use public transit and car pools more frequently. In Pittsburg, using averages, employees have a longer commute time (41.3 minutes) than the normal US worker (25.1 minutes).

Additionally, 12% of the workforce in Pittsburg have "super commutes" in excess of 90 minutes. In 2017, the most common category of travel for workers in Contra Costa was *Drove Alone*, followed by those who *Carpooled* and those who rode *Public Transportation*.

Detailed information can be found at: <https://datausa.io/profile/geo/contra-costa-county-ca>  
<https://datausa.io/profile/geo/pittsburg-ca/>

Many Contra Costa youth don't drive and have parents that work distances away from Contra Costa, leaving few options for youth to travel to work and class during the day. The lack of a strong public transit system is a barrier for adults without a car as well, particularly those wishing to find employment out of town.

Possible solutions would include things such as: pushing for more frequent buses to schools, colleges, etc. and increasing employment and training opportunities closer to home.

### ***Affordable childcare for working mothers and parents living under the poverty line is another barrier to economic mobility.***

The following data is from:

<https://uwba.org/wp-content/uploads/2017/10/ContraCosta-Snapshot.pdf>  
<https://datausa.io/profile/geo/pittsburg-ca/>

In Pittsburg, 13.6% of the population (9,800 out of 72,000 people) live below the poverty line. The largest demographic living in poverty are females: ages 35 - 44, followed by males: ages 6 - 11, and then females: ages 25 - 34.

According to the California Self-Sufficiency System (SSS), 61% of single mothers in Contra Costa County are living below the minimum standard for self-sufficiency.

Possible solutions would include a program for affordable or free childcare for working mothers/caregivers that are struggling with poverty. A service such as this can help alleviate the financial burden of childcare on the already struggling mother and by proxy help their children grow up in an environment where they have access to the necessities required for success.

*Another factor related to economic mobility is homelessness.*

In Contra Costa County on January 25, 2017 (<https://cchealth.org/h3/coc/pdf/PIT-report-2017.pdf>): there were 1,607 persons experiencing homelessness; 57% of them were unsheltered. The population included 381 with *Substance Use Disorder*, 368 with a *Mental Health Disability*, 331 *Chronically Homeless*, 224 *Victims of Domestic Violence*, 99 *Veterans*. Among those counted were 84 families and 160 minors.

In Contra Costa County on January 23, 2018 (<https://cchealth.org/h3/coc/pdf/PIT-report-2018.pdf>): There were 627 more individuals experiencing homelessness than the previous year's count of 1,607.

This increase reflects a similar growth in homeless populations over recent years in California and across the Bay Area. Rising rents and scarcity of affordable housing contribute greatly to the housing crisis resulting in more persons seeking homeless-related services.

The number of persons accessing homeless services last year in Contra Costa increased by 13%. Within the homeless population of Contra Costa County in 2018 there were 89 families living with children. In Contra Costa County from 2017 to 2018 there was a 39% increase in individuals identified as homeless

Possible solutions would include, first of all, a survey of the homeless population in Pittsburg. Exploring the prospect of alternative housing of any sort would be beneficial here for both youth and adults - anything from a regular home to repurposed RV's or shipping containers, tiny homes etc. could help.

Also, measures to prevent homelessness in at risk communities, such as programs for subsidized housing, childcare, drug rehab, therapy for veterans etc., could help by addressing the root causes of homelessness before it happens for many.

**Student Engagement**

Youth engagement in the educational process, particularly as it impacts career/college preparation, is probably the single most important issue facing the city of Pittsburg.

As previously stated in the section on the *Social Determinants of Health*:

There are predictable outcomes related to youth who become disengaged because of family, school, and neighborhood disparities. Because they are in developmental transition, adolescents and young adults are particularly sensitive to environmental influences, such as family, peer group, school, neighborhood, policies, and societal cues.

These factors can affect the physical, cognitive, and social-emotional foundation for the lifelong health, learning, and wellbeing of youth and can lead to smoking, alcohol and drug use, and risky sexual behavior, as well as health problems such as obesity, diabetes, heart disease, sexually transmitted diseases, and attempted suicide.

Addressing young people's positive development facilitates their adoption of healthy behaviors and helps to ensure a healthy and productive future adult population. Therefore, it is important to emphasize a focus on health and education indicators for children and adolescents when discussing youth development strategies because youth are our economic, workforce and education pipeline for regional economic stability, and their health and wellbeing is a predictor of future community health and prosperity.

Considering the factors above, it is important to review the current stats related to Pittsburg and Contra Costa youth.

**For comparison purposes, we will start with Contra Costa data related to *School Connectedness, Community Connectedness, and Emotional/Mental Health*.** We will then follow with similar and additional data related to the Pittsburg Unified School District (PUSD).

**California Healthy Kids Survey (CHKS), 2016-17**

**Contra Costa County**

**1. School Connectedness**

**Binge Drinking in Past Month (Student Reported)**

| Contra Costa County              | Percent |       |        |          |            |            |
|----------------------------------|---------|-------|--------|----------|------------|------------|

**3. Emotional/Mental Health**

**Depression-Related Feelings (Student Reported)**

| Contra Costa County              | Percent |       |
|----------------------------------|---------|-------|
| Level of Connectedness to School | Yes     | No    |
| High                             | 19.9%   | 80.1% |
| Medium                           | 33.4%   | 66.6% |
| Low                              | 47.1%   | 52.9% |

| Race/Ethnicity                   | Yes   | No    |
|----------------------------------|-------|-------|
| African American/Black           | 25.9% | 74.1% |
| American Indian/Alaska Native    | 27.0% | 73.0% |
| Asian                            | 24.7% | 75.3% |
| Hispanic/Latino                  | 32.2% | 67.8% |
| Native Hawaiian/Pacific Islander | 32.9% | 67.1% |
| White                            | 24.6% | 75.4% |
| Multiracial                      | 29.5% | 70.5% |
| Other                            | 24.5% | 75.5% |

**California Healthy Kids Survey (CHKS), 2016-17**

**Pittsburg**

The following data is from the most recent *California Healthy Kids Survey (CHKS), 2016-17, for the Pittsburg Unified School District (PUSD)*.

We have provided in this document the most relevant tables. The link to the full report is provided below:

[https://data.calschls.org/resources/Pittsburg\\_Unified\\_1617\\_Sec\\_CHKS.pdf](https://data.calschls.org/resources/Pittsburg_Unified_1617_Sec_CHKS.pdf)

The report is prepared annually by WestEd, a research, development, and service agency, in collaboration with Duerr Evaluation Resources, under contract from the California Department of Education Coordinated School Health and Safety Office. The youth survey modules consist of key questions, identified by an expert advisory committee, that are considered most important for schools to guide improvement of academic, health, and prevention programs and promote student achievement, college and career readiness, positive development, and well-being. Student identities are protected.

**1. Summary of Key Indicators**

**Table A2.1**

**Key Indicators of School Climate and Student Well-Being**

|   | Grade 7<br>% | Grade 9<br>% | Grade 11<br>% | NT <sup>A</sup><br>% | Table |
|---|--------------|--------------|---------------|----------------------|-------|
| <b>School Engagement and Supports</b>                 |              |              |               |                      |       |
| School connectedness (high)                           | 35           | 33           | 32            | 56                   | A4.5  |
| Academic motivation (high)                            | 27           | 23           | 23            | 35                   | A4.5  |
| Truant more than a few times <sup>T</sup>             | 2            | 4            | 6             | 26                   | A4.2  |

## Key indicators identified through the *California Healthy Kids Survey (CHKS), 2016-17* for Pittsburg:

### School Engagement and Supports

#### *School Connectedness:*

Only 35% of 7th graders; 33% of 9th graders, and 31% of 11th graders felt a high degree of school connection.

#### *Caring Adult Relationships:*

Only 23% of 7th graders; 23% of 9th graders, and 33% of 11th graders felt a high degree of caring adult relationships.

#### *Meaningful Participation:*

Only 10% of 7th graders; 10% of 9th graders, and 11% of 11th graders felt a high degree of meaningful participation.

### School Safety

#### *School Perceived to Be Safe:*

Only 56% of 7th graders; 45% of 9th graders, and 55% of 11th graders felt a high degree of school safety.

### Mental and Physical Health Risks

#### *Current Alcohol or Drug Use:*

14% of 7th graders; 13% of 9th graders, and 20% of 11th graders reported current alcohol or drug use.

#### *Ate Breakfast*

42% of 7th graders; 47% of 9th graders, 41% of 11th graders, and 63% of *continuation, community day, and other alternative school* students reported not eating breakfast on school days.

#### *Experienced Chronic Sadness/Hopelessness:*

30% of 7th graders; 30% of 9th graders, and 31% of 11th graders said they had recently experienced sadness or hopelessness.

### Suspensions, Expulsions, and Chronic Absenteeism

In addition to the California Healthy Kids Survey, we looked at data from the *California Department of Education: [www.caschooldashboard.org](http://www.caschooldashboard.org)*.

Looking at data pulled from the California Department of Education California School Dashboard for the 2017-2018 school year, Pittsburg Unified School District had:

- A 90.8% graduation rate (increased by 3.8% from the last year)
- A 49.3% college/career preparation rate (increased by 23.3% from the last year)

However, the district also had:

- A 7.7% suspension rate (increased by .5% from the last year)
- A 11.4% chronic absenteeism rate (increased by 1.4% from the last year)

A deeper dive into California Department of Education data indicates that the **suspension** rate of 7.7% is higher than both the county average of 4.1% and statewide average of 3.5%. Of the students suspended, African Americans have the highest suspension rate at 16.7%. Hispanic students made up 63.5% of the student population and accounted for 48.2% of suspensions. African American students made up only 17.1% of the student population but accounted for 37.3% of total suspensions.

In addition, the district had a 0.06% **expulsion** rate. This is higher than the county average of 0.04% but lower than the statewide average of 0.08%. Of the 7 students expelled 3 were black/African American, 3 were Hispanic/Latino and 1 was Filipino.

According to the **U.S. Department of Health and Human Services** and the **U.S. Department of Education**:

“Suspension and expulsion can influence a number of adverse outcomes across development, health, and education. **Young students who are expelled or suspended are as much as 10 times more likely to drop out of high school, experience academic failure and grade retention, hold negative school attitudes, and face incarceration than those who are not.** Not only do these practices have the potential to hinder social-emotional and behavioral development, they also remove children from early learning environments and the corresponding cognitively enriching experiences that contribute to healthy development and academic success later in life.”

“**Expulsion and suspension practices may also delay or interfere with the process of identifying and addressing underlying issues, which may include disabilities or mental health issues.** Some of these children may have undiagnosed disabilities or behavioral health issues and may be eligible for additional services, but in simply being expelled, they may not receive the evaluations or referrals they need to obtain services. For example, **the source of challenging behavior may be communication and language difficulties,** skills that can be improved through early assessment and intervention services. In these cases, appropriate evaluation and follow-up services are critical, but less likely if the child is expelled from the system.”

“Finally, **expulsions may contribute to increased family stress and burden.** Even where assistance is offered, *often there is a lapse in service which leaves families, especially working families, in difficult situations.*”

– U.S. Department of Health and Human Services and U.S. Department of Education, *Policy Statement on Expulsion and Suspension Policies in Early Childhood Settings* (Dec. 10, 2014)

Statistics related to suspensions and expulsions with a focus on the “defiance” disciplinary code is included for two reasons. The first is that it shows a huge population disparity related to children and adolescents of color. The second is that as mentioned above, suspensions and expulsions can lead to academic failure, dropouts, and prison; all of which have impact on social determinants related to the health of children and adolescents whose negative affects follow them into adulthood.

Further, as stated by **former U.S. Attorney General Eric Holder:**

“**We’ve seen that severe discipline policies often increase the numbers of suspensions and expulsions without effectively making schools safer or creating better learning environments.** And we’ve seen that the impacts of exclusionary policies are not felt equally in every segment of the population – with students of color and those with disabilities often receiving different and more severe punishments than their peers.”

– Eric Holder, now former U.S. Attorney General: *Remarks at the U.S. Department of Justice and U.S. Department of Education School Discipline Guidance Rollout at Frederick Douglass High School in Baltimore, Maryland* (Jan. 8, 2014)

Moreover, according to the **National Education Association:**

“A suspension can be life altering. It is the number-one predictor – more than poverty – of whether children will drop out of school and walk down a road that includes a greater likelihood of unemployment, reliance on social-welfare programs, and imprisonment.”

– *The School-to-Prison Pipeline: Time to Shut It Down*, NEA Today (Jan. 5, 2015)

“Far too many of our most vulnerable students are excluded from class for minor, non-violent behavior, which puts them at great risk for academic failure, dropping out, and an unnecessary journey down the school to prison pipeline.”

Dennis Van Roekel, former President, *Let’s Stop the School-to-Prison Pipeline* (Mar. 13, 2014)

### III. INITIATIVE FOCUS AND COLLABORATIVE STRATEGY BASED ON FACT-BASED INDICATORS

We have identified above the key indicators underlying critical issues that can inform an initiative focus and outcome-based strategy or set of strategies to impact priority issues facing the city.

This conceptual framework can help guide a facilitated collaborative process to oversee and implement the desired strategies and to measure outcomes.

This framework can also help guide policy related to youth services funding that aligns with agreed-upon partner goals and provides long-term financial stability to encourage and enhance system cohesion, interlocking partner roles, service integration, community trust and support, and advocacy for targeted youth and families.

#### *Next Steps*

##### **Determine Initiative Focus and Outcome-Based Strategy**

The immediate next step in this process is for the City of Pittsburgh to review the data and the identified indicators underlying critical issues of concern and decide on an initiative focus and outcome-based strategy or set of strategies that will impact particular priority issues facing the city.

##### **Determine Initiative Goals and Outcome Measures**

Determining goals and projected outcomes for the initiative and how they will be measured will be an important consideration in designing an initiative focus and strategies.

For example, based on the indicators described above, projected outcomes of an initiative could include one or more of the following sample measures:

- Improvement in key health and education indicators for youth and young adults
- Training opportunities and variety of training options are increased and result in an increase in local employment in areas of labor leakage
- Crime stats show a significant reduction in violent and property crimes because of an increase in employment and community revitalization projects
- Social capital and collaboration are significantly increased and evidenced by the establishment of and participation in local community organizations and efforts

##### **Determine Initiative Partners and Stakeholders**

Depending on the initiative focus and key strategies that the City of Pittsburgh decides to utilize in order to impact particular indicators, the appropriate stakeholders and collaborative partners would need to be identified through conversation with the planning team. Therefore, we are not listing particular individuals in this document.

#### ***Collaborative vs. Collective***

We emphasize the **collaborative** approach because it allows for concerted and intentional engagement, the creation of interlocking roles for sustainability, and shared accountability for outcomes that have been mutually agreed upon. Having these interlocking roles and mutual accountability memorialized in writing will create a basis for strategy implementation and support the success of the initiative.

Emerald frequently uses the charts below to emphasize why we suggest *Collaborative* vs *Collective* project engagement.

### Collective vs. Collaborative

We describe a collective as an aggregation of efforts where the parties are working towards a common goal, with an agreed upon core set of principals and values to which they have all contributed, but have no mutual accountabilities in the form of interlocking roles.

### Collaborative vs. Collective

We describe a collaborative as a group of entities and/or individuals, working together towards a common goal with mutual accountability to one another, in the form of interlocking roles, to accomplish a single mutually agreed upon outcome and to strengthen the capacity of both the individual organizations and the eventual network.

## IV. Final Thoughts

To create a plan that carries a *shared vision and common ground* through an interactive process, your team must absolutely, completely, and stubbornly avoid “habitus.”

***Habitus is public enemy #1 in any planning process.***

Habitus is the compilation/field of behaviors, history, beliefs, attitudes, and practices that support the continuation, maintenance and empowerment of biased thinking surrounding a problem or issue.

***Habitus acts as a strong catalyst for resistance to change.***

In other words, it is the stuff that fuels silos, irrational fears, prejudice, exclusion, inflexibility, and negative competition.

***However, fact-finding as a key element of the planning process helps reduce the power of habitus.***

Fact-finding helps fight habitus and fuels a credible strategy and approach that will draw support, gain wider acceptance, spark excitement, and get results.

Pittsburg has an opportunity to change health, education, and economic outcomes in for all residents, including English learners, people living in poverty and low wage work, youth who are disengaged, homeless people, formerly incarcerated people, people of color, veterans, residents commuting long hours, and recent immigrants.

It’s totally possible with the right strategy.

To do so would be amazing and have a transformative impact on the city of Pittsburgh and the region.
